

- Ready prepared for simplified use -
straight from package to solution to implantation with no wrapping
- Integrated absorbable, braided, suture platform¹ -
braided double strands provide strong, convenient, and standardised fixation points for muscle attachment
- Pure alumina (aluminum oxide) -
bio-inert, fully synthetic, bioceramic composition
- Proprietary Ceramisys™ surface production¹ -
*smooth surface for ease of insertion -
without a non-porous coating*
- Eliminates the need for donor tissue -
no risk of tissue transmitted disease or need for second surgical site
- Ultra-porous, 100% interconnected, even pore distribution -
ideal tissue support scaffold without dead pockets
- Very light weight -
over 30% lighter than coral (HA) based products

- High strength -
easily drilled for motility peg and non-friable
- Premium features, yet competitively priced
